## Socioeconomic Profile

## Mitchell County

The median household income in Mitchell County is less than the median household income of the state. More households in Mitchell County are in the \$50,000 to \$99,999 household income group while more of Iowa households are in the \$100,000 or more household income group. The median value of owner-occupied housing can vary among counties. The median value of owner-occupied housing units is lower in Mitchell County than for the state. There is a lower percentage of vacant housing units in Mitchell County than there is for the state. Many housing units in Mitchell County were built prior to 1940. Mitchell County has a lower percentage of college graduates than does the state.

**Median<sup>4</sup> Household and Per Capita Income, 2018-2022<sup>2</sup>**

	County		State	
	Estimate	MOE*	Estimate	MOE*
Total households	4,505	+/- 139	1,290,139	+/- 4,032
Less than \$14,999	8.2%	+/- 1.7%	7.8%	+/- 0.4%
\$15,000 to \$34,999	15.3%	+/- 2.1%	15.2%	+/- 0.6%
\$35,000 to \$49,999	13.4%	+/- 2.9%	11.9%	+/- 0.2%
\$50,000 to \$99,999	32.6%	+/- 2.4%	32.2%	+/- 0.6%

## Notes and Source Information:

<sup>1</sup> U.S. Census Bureau; Decennial Censuses 1940 - 2020

<sup>2</sup> U.S. Census Bureau; American Community Survey 2018-2022

<sup>3</sup> For the 2020 Decennial Census, households are divided into subcategories by two different methods. One method (family or nonfamily) is based on the presence or absence of family relationships among the household members and the householder. Using family relationships (birth, marriage, or adoption) has been the usual way to classify households, and the data using this method has good comparability between 2010 and 2020. In 2020, the Census Bureau introduced an additional method to divide households into subcategories. This second method (couple or noncouple) is based on the presence or absence of a couple relationship for the householder. The relationship can be as a married spouse or as an unmarried partner and can be of the opposite or same sex. The 2020 data reported for the second method (except for married couples) does not have good comparability with data from 2010. In this profile, the 2020 data are reported, but items for 2010 are omitted.

<sup>4</sup> Median is the middle value of a distribution.

<sup>5</sup> The age dependency ratio compares, by age, those typically not in the labor force with those who typically are in the labor force. Old Age dependency is persons 65+ per 100 persons age 18-64. Child dependency is persons under age 18 per 100 persons age 18-64. The total age dependency ratio is persons under age 18 plus persons 65 or older per 100 persons age 18-64.
